Steps into Practice Application

- Current work and document in prep by Vahid

  - **Need these findings presented in NZSEE conference 2019 (?)**

- Set up a reference document for what metrics are used for comparing against analyses using recorded GM – this becomes the start of in-practice comparisons between recorded suites and simulated suites

- Guidance on how to appropriately compare the data from Recorded GM and Sim GM analyses (and therefore get this to be consistent across consultants/disciplines

- This reference doc could be either an extension of the 2016 guideline or are partner document

- Aim for 2020 is to have a catalogue of examples to support the expanded guideline document
