

Special Projects

Special projects are major externally-funded research programmes which are aligned with the QuakeCoRE mission, as well as its core values and culture.

Special Project 1: Spatially-distributed Infrastructure: *This project seeks to develop tools to assess the seismic performance of spatially-distributed infrastructure networks subject to extreme natural hazards.*

Special Project 2: Resilience to Natures Challenge (RNC): *This project invest efforts to develop new assessment, design and decision systems that will improve the resilience of the built environment and infrastructure networks that support New Zealand.*
