

Known issues with the workflow

Add new issues to this page once every two weeks. If something has been corrected, cross it. When planning the sprint, we should look here to add tasks as well.

Known issues as on 25 Jun 2018

- BB in binary is taking longer than expected. This needs to be investigated.
- ~~The VMs generated for CS v18p6 were faulty. The issue was found when we tried to submit some of the simulations. This requires more testing besides completion.~~ Still working on fixing the VM generation on Kupe. It seems to hang.
- Jonney's workflow automation seems to take a very long time to query the DB when executed through ssh (~5 minutes).
- ~~CS install script is not creating all the necessary parameter files.~~
