Disabled Item

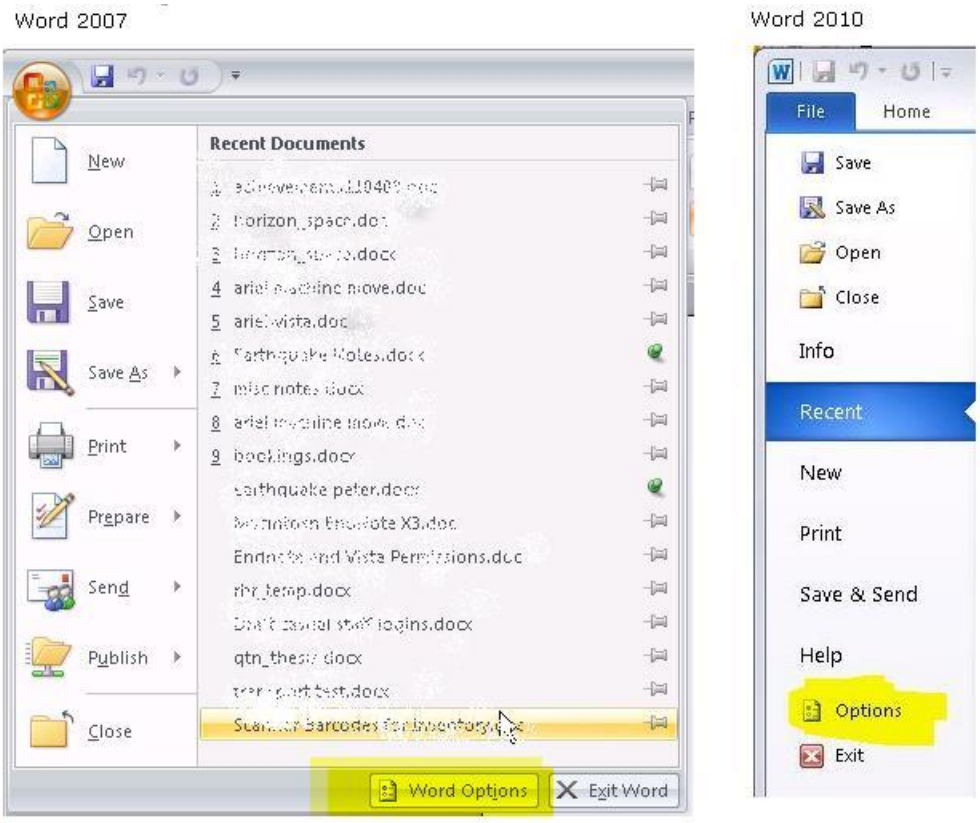

If EndNote is disable by Word, the toolbar/EndNote tab is usually hidden.

Word 2000/2002/2003:

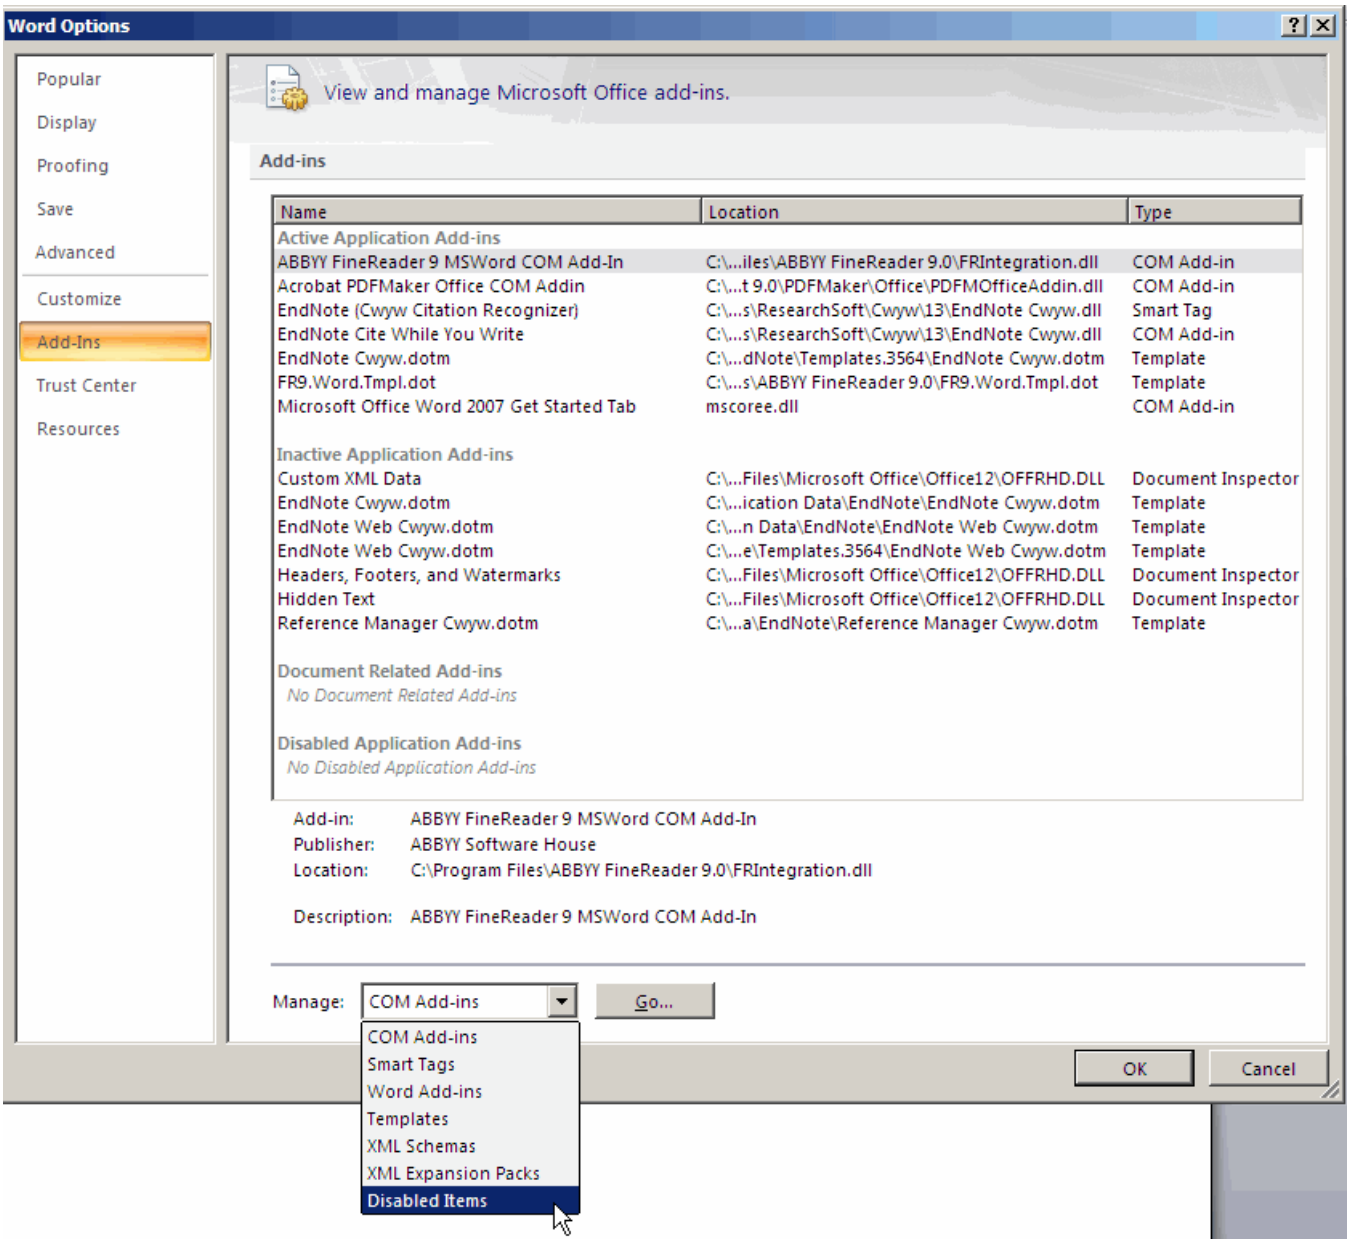

- Click the "Help menu" and select "About Microsoft Office Word."
- Click "Disabled Items."
- Highlight any EndNote item(s) and click "Enable."
- Click Close.
- Click OK.

In Word 2007 or 2010:

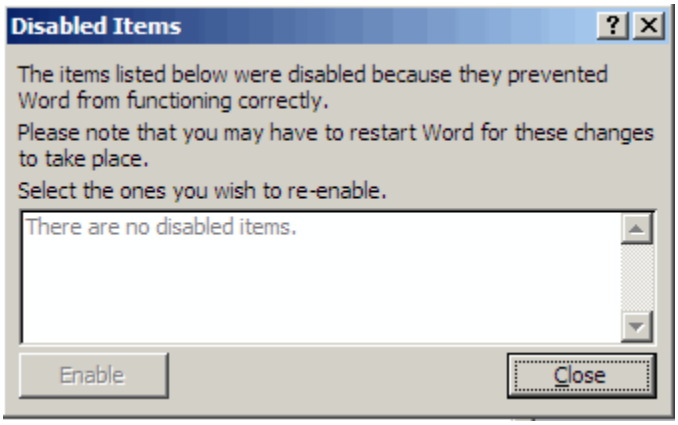

For Word 2007 click on the go to the Home button and select the Word Options link at the bottom (left hand diagram). In **Word 2010** click on File and select Options (right hand diagram).

In the left hand column select the entry Add-ins, then at the bottom of the screen use the down-arrow to select the entry 'Disabled Items'. The following Screen shot is from Word 2007 but is similar in Word 2010.

Click on Go. You will get a window like this:

This example has no disabled items, but if you see anything like EndNote, or Citewyw or similar, then highlight them and click Enable. Restart Word. This may fix the problem.
