

Datastream

Configuration change required post earthquake

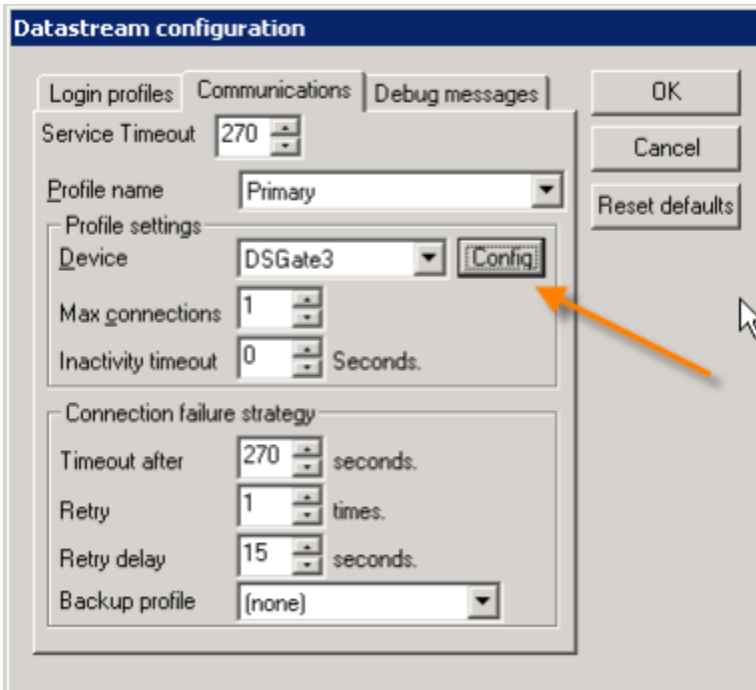

Note: this is now the permanent configuration

May 2011

Post earthquake the Datastream gateway computer has been repaired and is in a temporary location. However, for better long-term security a new virtual gateway has been created.

If you have Datastream software on your PC, you will need to make one change to use the new gateway.

- Open Datastream
- Select from the top menu bar, **Tools**
- Choose the option about 1/3rd of the way down called **Configure Communications**
- Select the middle tab, **Communications**
- Click on the button called **Config** (shown below)

- Change the IP number to 132.181.7.177 as shown in the following screen shot)

Datastream configuration

DSGate configuration

Queue name

User name

☐ Add Login Id to User name

Protocol

TCP settings

Gateway name

Port

- Click OK and again and Datastream should now connect.
