

Downloading records from Google Scholar

👍 The record from Google Scholar will be fine for essays but you may want to copy and paste an abstract and/or keywords directly from the article or from another database - Google Scholar works best for journal articles but mistakes do creep in so it always pays to check the final record

👍 If you are using a laptop you may not have the link to EndNote under each record. Click on Google Scholar **Settings** on top right and then scroll to the end of the new page, where you will need to change to **show links to import citations into...EndNote..** then click on **Save** button on the bottom of the page.

- Once your preferences are set to download records into EndNote you can download records into your EndNote library but only one at a time....!

[Lessons from the Destructive Mw 6.3 Christchurch, New Zealand, Earthquake](#)

M Reyners - [Seismological Research Letters, 2011](#) - [srl.geoscienceworld.org](#)

At 12: 51 local time on 22 February 2011 New Zealand's second largest city was struck by a close, shallow Mw 6.3 **earthquake**. The event caused widespread damage in the city and resulted in about 180 deaths. At the time of this writing parts of the central business district ...
