

International efforts

Misc notes from BB

Collate different research that has already been performed on NZ structural array data (geotech arrays not installed yet).

Identify existing work using US and Japanese building and geotechnical array data to validate models.

- John Wallace - LA tall building instrumentation
- Greg Deierlein - UC Berkeley Sim Center collaboration
- Jon Stewart - approx 20 of 40 downhole arrays in CA have useful information
- Taiwan data - apparently significant high quality data that is under-utilized
- James Kalkanos - KikNet 1D analysis studies
- Ellen Rathje - KikNet site response analysis
- Missing from the above (CA-wide buildings; Japan buildings; Taiwan both; South America? Europe?)
