# EndNote and PBRF

If you have an EndNote (or BibTeX) library that contains citations that you would like added to the **Profiler database**, Research & Innovation can help you. The process is very simple - you'll need to:
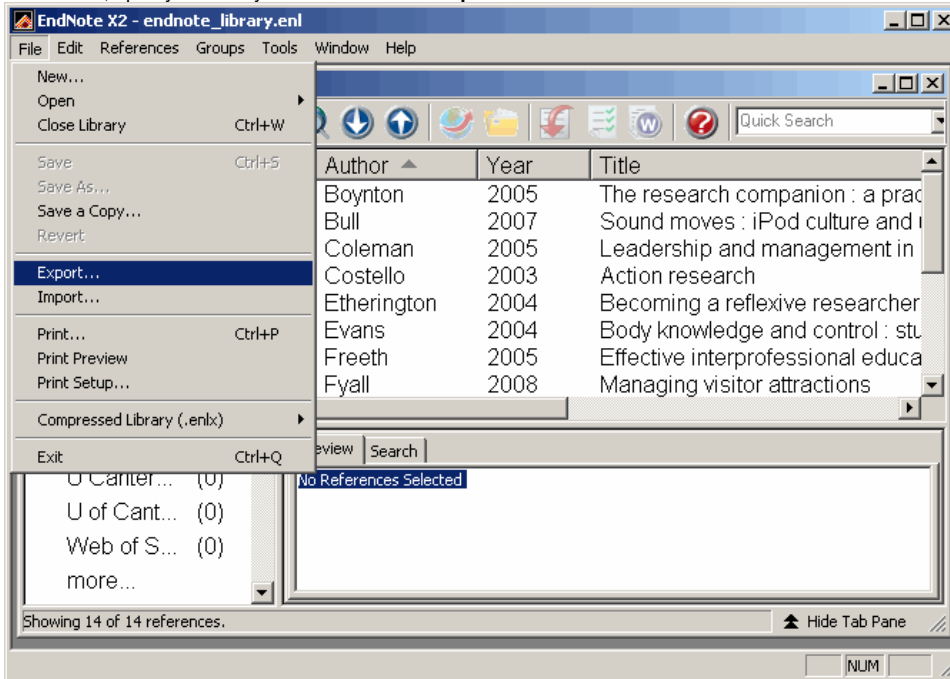

1. Follow the instructions below to convert your EndNote or BibTeX libraries to EndNote XML format
2. Send your EndNote XML file to Maxine Bryant in Research & Innovation
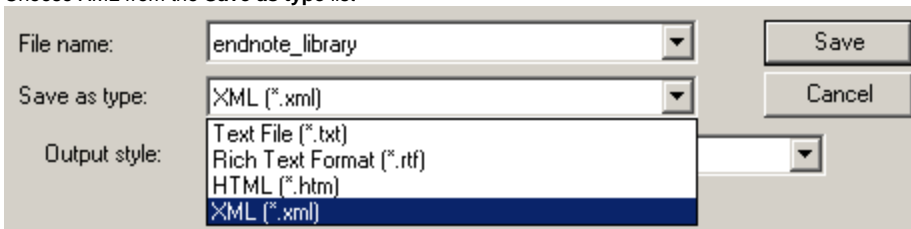

...

## Exporting to EndNote XML

### To export your entire library

1. In EndNote, open your library and choose **File > Export**

2. Choose XML from the **Save as type** list

### To export selected records

1. In EndNote, open your library and select the records that you want to export
2. Select **File > Export**
3. Choose XML from the **Save as type** list, and tick the **Export Selected References** checkbox

## Converting from BibTeX to EndNote XML

There is an online tool called bibconvert available for you to do the conversion yourself, or you can contact Maxine Bryant  for assistance. However, it is old (2005) and does not always work. A more reliable tool (although it can have character conversion problems) is presented at Trent Apted's site.

## To use bibconvert:

1. Select BibTeX as the **input format** and EndNote XML as the **output format**
2. Click **submit conversion formats**
3. Browse for your BibTeX file, and modify the output options for EndNote version to version 8
4. Click **Submit file and start conversion**

> ⓘ   Large libraries may take a little while to convert

5. When the conversion is complete, right-click the **Get the EndNote 8 XML file** link and choose **Save link as** (Firefox) or **Save target as** (Internet Explorer) to save the XML.
